GREAT IMPROVEMENT IN DENTIS.

The attention of the public is called to a great discovery in Dentistry.

THE GREATEST ADVANCE STEP EVER
MADE INTRIE ART.
The main difficulty in wearing artificial teeth is, they do not hold in their place firmly enough, and add to this the annoyance of food getting under the plate while cating. I have discovered a method of so constructing the plate on which the teeth are set that they will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking, neither will not start or drop while cating or smeaking.

which the teeth are set that they will not start or drop while eating or speaking, neither will any particles of food get under the plate, no matter what the condition of the mouth is, which is not true of any method hithertoused.

I have secured Letters Patent for the United States, England and France.

States, England and France.

The improvement is not in material, but in the construction, which specures the atmospheric pressure on the entire plate.

Thave secured Letters Patent for the United States, England and France.
